Michigan State University Postdoctoral position

Description: A postdoctoral scientist position is available to work on a jointly funded USDA and NASA project. The project integrates forest inventory and remotely sensed data with ecosystem models to improve prediction of forest carbon sources and sinks over large domains. A strong candidate will have experience in geostatistics modeling, forest ecology, ecosystem modeling, statistical programming, and analysis of remotely sensed data including LiDAR. The postdoctoral scientist will work collaboratively with researchers at Michigan State University and USFS Northern Research Station. The initial appointment period is 1 year.

Application Instructions: Applications and required documents must be submitted to Dr. Andrew Finley (finleya@msu.edu). Include a cover letter, statement of interest and goals, resume/CV, three relevant reprints or pre-prints, and names and contact information for three references. Deadline for receiving applications is December 17, 2010.
